

## Next Generation Landscape Lights

Beautify your facility with GTL Landscape's elegant and energy efficient luminaires. Savvy property owners long ago replaced their incandescent- and halogen-based landscape lighting with energy efficient LED's. Now GTL introduces full-color, individually programmable, and full 360° illumination for your trees. Make your property stand out from the pack in brilliant and dazzling white—or bathe it in warm and welcoming amber. Turn your public spaces into a colorful holiday wonderland by simply touching your smartphone. GTL Landscape's fixtures include a control system originally developed for Broadway productions. Built to our exacting standards for long life and color accuracy, each model undergoes rigorous testing prior to installation. Our engineers provide mounts and color animations to enhance the quality of your unique installation, including special sequences to celebrate patriotic and religious holidays.

Our computer lighting controllers orchestrate the color and intensity of hundreds of lights with millisecond accuracy—and also integrate with landscape lighting, wall washes, and path lights to provide a cohesive outdoor experience for your tenants and guests. An internal calendar triggers lighting scenes based on date and time—automatically running special programs on holidays—while keeping track of sunrise and sunset for additional energy savings.

Sealed power supplies and actively cooled, weatherproof enclosures protect your investment from the extremes of the Gulf climate. Facility engineers appreciate the flexibility of our designs, including optional integration with existing building-management systems and wired and wireless networks. We never play "hide the ball" with software in an attempt to lock clients into a relationship. Though we're supremely confident in our start-up and programming services, we provide your staff with the piece-of-mind of a full suite of programming software and easy-to-use iPhone and Android applications.

As a local Houston business, we cherish our public spaces and enjoy them with our families. Therefore we monitor our installations as a matter of both good business and personal pride, supplying unmatched maintenance and after-installation care. Your landscaping represents a significant investment and source of beauty for your tenants and community. Make sure it is seen in the best light.
